

# Space Questions

Signed TRAVIS W.

Reflection on progress:

- I found information that was useful. Yes / No
- The information answered questions I needed to answer Y/N
- I learned new things from reading the information. Yes / No
- I found information that agreed with what I thought I knew or corrected my misunderstanding. Yes / No
- I was able to use this information to fulfill my learning responsibilities. Yes / No

What do you think you did best in this piece of work? finding the pictures and research

What part of your work would you most like to improve? I would put it on you tube

Question: Does Jupiter  
have the biggest  
moon?

Name: Travis

Where did I look for  
the answers?

<http://www.enchantedlearning.com/subjects/astronomy/planets/jupiter/moons.shtml>

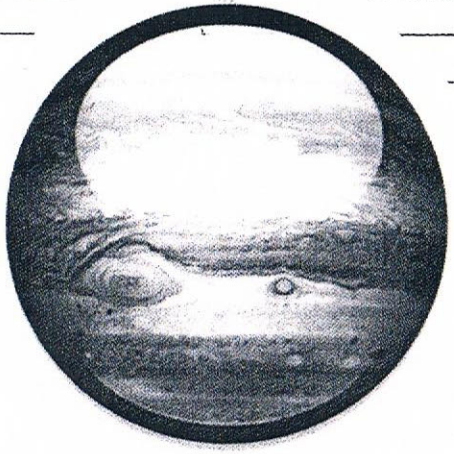

Ganymede is the largest moon of Jupiter.

I wonder why that is? Jupiter has a magnetic field and <sup>it did not do that,</sup> it probably has a molten iron core. <sup>It</sup> takes Ganymede 171.75 hours (7.15 Earth days) to orbit Jupiter.

That is a very long time. Ganymede was discovered <sup>in 1610</sup> by Galileo and Simon Stevin. WOW that is new to me (cool)!!!! Ganymede is the biggest in the solar system. Wow that is big.

is big.

SOLAR SYSTEM ICONS
